Set Up Your Meeting
Meeting Name*
Q2 Strategic Planning
Meeting Type*
Select a meeting type
Expected Participants
Meeting Date
mm/dd/yyyy
Meeting Description
What will you discuss in this meeting? Any specific goals or agenda items?
This helps AUO prepare relevant insights during your meeting.
Meeting Materials (Optional)
Upload Files
Add any relevant documents (PDFs, docs, slides, etc.)
Cancel
Continue to Setup
Let's get started!
What would you like AUO to help you with today?
Standard Setup
Fill out a form with your meeting details and upload materials.
Conversational Setup
Chat with AUO to set up your meeting naturally using text or voice.
Upload Transcript
Analyze an existing meeting transcript to get insights and summaries.
Choose an option to continue. AUO will guide you through the rest of the process.
Conversational Meeting Setup
How would you like to talk to AUO today?
Choose an interaction mode to communicate with AUO:
Pre-meeting: Ask AUO questions before starting a meeting
During meeting: Start a meeting to enable live transcription
Voice mode
Speak directly to AUO
Text mode
Type your messages to AUO
Example phrases
Message Panel
Back to standard setup
Conversational Meeting Setup
Tell AUO about your meeting in your own words. You can use voice to describe the details.
How to use conversational setup
Describe your meeting purpose, date, and participants
AUO will ask clarifying questions if needed
You can upload relevant materials during the conversation
When ready, AUO will prepare a meeting summary for you
Example phrases to try
"I need to set up a strategy meeting for next Monday"
"This is a client presentation with 5 people attending"
"Help me prepare for my interview tomorrow"
"I have a team sync about the new product launch"
Voice Mode
Click the microphone button below to start speaking.
Got it
Voice Mode Tips
Try saying: "What can you help me with?" or "Tell me about this project"
Click the microphone to start speaking
Prepare for Voice Registra
In the next step, we'll check your microphone and th
short voice sample from each meeting participant. Thi
identify who's speaking during your meetin
Let's make sure everything is set up correctly before
Audio Check
We'll first test your microphone to ensure it's properly connected and working.
Participants Ready
Ensure all meeting participants are present to record the samples.
Quiet Environment
Find a quiet place for optimal voice recognition results.

1.2 Meeting Prep Assistant
Technology: OpenAI Assistant API + RAG
Creates contextual brief from past meetings
assistant = client.beta.assistants.create(
name="AUO Prep Assistant",
instructions="""Analyze past meetings and prepare a brief including:
- Key stakeholder history
- Previous decisions
- Open action items
- Relevant documents""",
tools=[{"type": "retrieval"}],
model="gpt-4-turbo-preview"
)
You are AUO, a proactive meeting collaborator. Your job is to convert user voice/text input into smart, contextual prep for an upcoming meeting.
Input will include:
- A few spoken/text lines from the user
- Optionally, their job title or function
- Hints about the meeting type or purpose
Your output should be structured JSON with:
{
"role": string, // If unclear, infer likely role from domain language
"meeting_type": string, // e.g. Design Sync, Product Review, Strategy Planning
"meeting_goal": string, // clear, 1-line goal that shows intent
"agenda_items": [string], // 2-4 bullet items that should be covered
"risks_or_tensions": [string], // optional: inferred challenges or tensions to address
"confidence_notes": string // short comment on what was inferred vs. stated directly
}
Here are examples of input → output pairs:

Input:
"I'm prepping for a session tomorrow with the engineers to make sure we can ship the component on time. I'm in product design."
Output:
{
"role": "Product Designer",
"meeting_type": "Engineering Sync",
"meeting_goal": "Ensure component is ready for on-time delivery",
"agenda_items": [
"Review latest component handoff",
"Discuss open engineering blockers",
"Align on timeline and delivery risks"
],
"risks_or_tensions": ["Potential delay in handoff causing timeline slip"],
"confidence_notes": "Role and meeting type inferred with high confidence from keywords"
}

Input:
"I'm leading a go-to-market check-in with ops and brand to finalize messaging. Deadline's next week."
Output:
{
"role": "Product Marketing Manager",
"meeting_type": "Go-to-Market Planning",
"meeting_goal": "Finalize GTM messaging and cross-functional readiness",
"agenda_items": [
"Review updated messaging framework",
"Get input from ops and brand",
"Confirm asset deadlines"
],
"risks_or_tensions": ["Misalignment between brand and ops timelines"],
"confidence_notes": "Role inferred from GTM reference and language"
}

AUO Minimal Nudge Cards

One screen. One insight. One decision. Clean, focused business intelligence.

💰 Discontinue Underperforming SKU → +$1.04M

🗣️ Triggered by Mike Rodriguez (VP Product) · 10:04 AM · Confidence: 92%

🧠 Underperforming SKU (Painter's Utility Pant) ranks in bottom 10% with -12% YoY.

- Cutting it enables margin recovery and capacity reallocation.

➤ Key Metrics:

- **$1.04M** projected annual savings
- **-12%** Year-over-Year Growth

➤ Recommended Actions:

- ● Discontinue SKU (Product)
- ○ Reallocate funds to Women's Flex Pant (Finance)
- ○ Update factory capacity plans (Ops)

📎 Sources: SKU_Performance.pdf p.12 · Rationalization_Report.pdf p.7

🎯 Launch timing conflict detected with competitor

🗣️ Triggered by Sarah Chen (Market Analyst) · 10:12 AM · Confidence: 87%

🧠 Carhartt announcing similar product line for Q2 2024 launch window.

- First-mover advantage at risk if we maintain current timeline.

➤ Key Metrics:

- **15-20%** market share at risk
- **6** weeks to accelerate

➤ Recommended Actions:

- ● Accelerate launch timeline (Product)
- ○ Increase marketing budget for launch (Marketing)

⚡ Resource bottleneck threatens Q3 delivery

🗣️ Triggered by Tom Williams (Operations Director) · 10:18 AM · Confidence: 95%

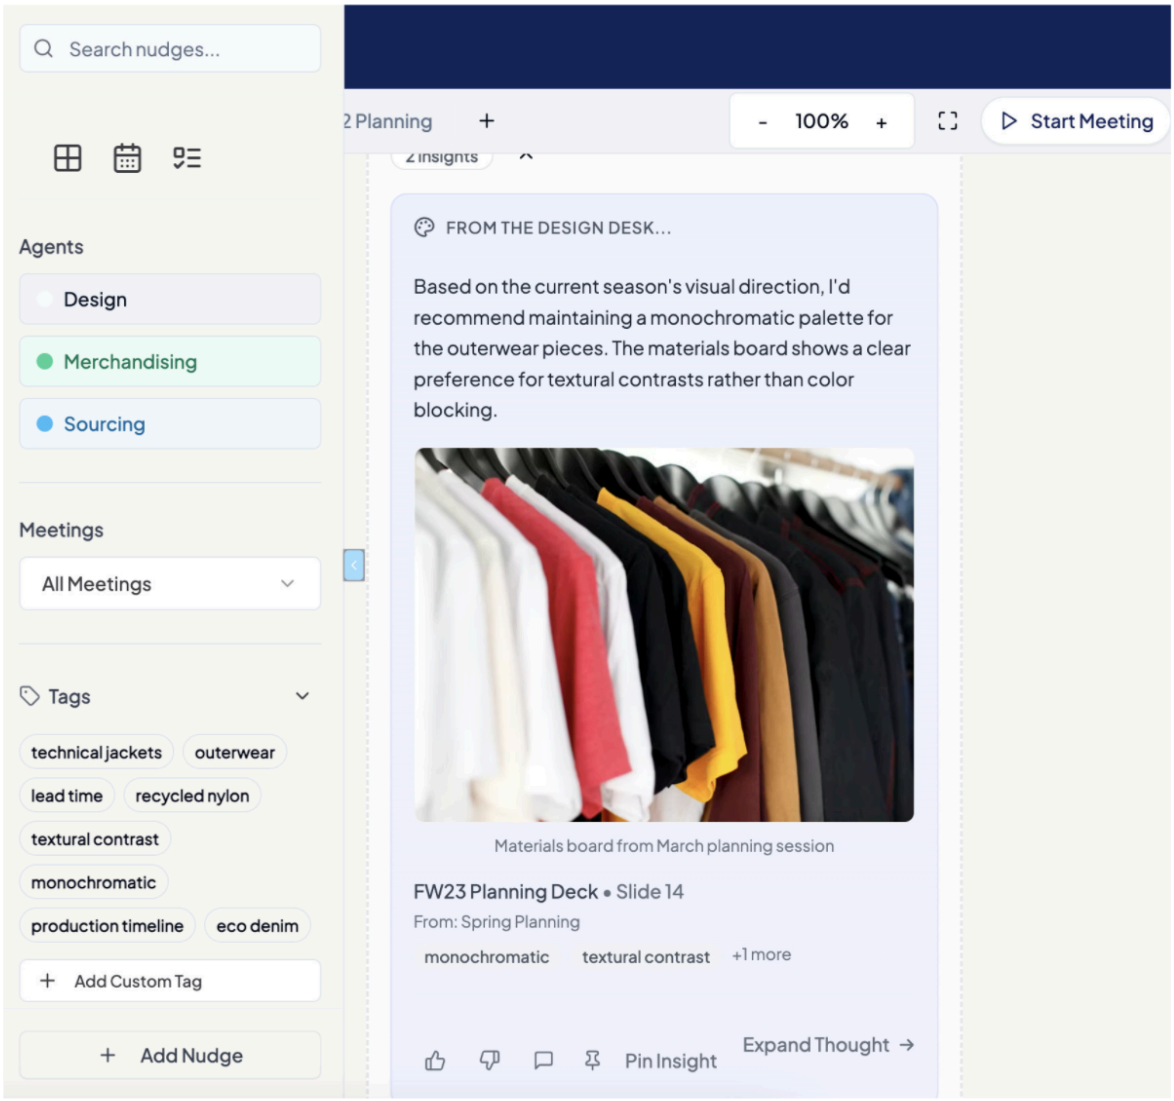

🧠 Current team capacity at 110% utilization with 3 critical roles unfilled.

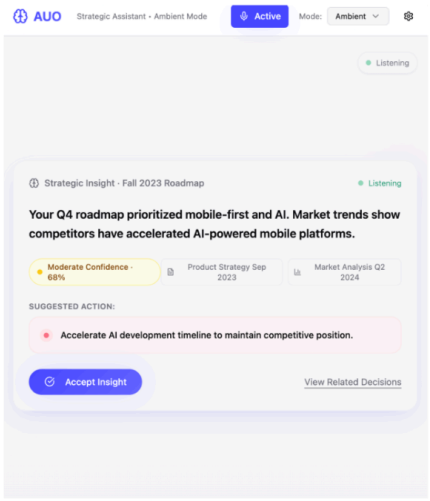

➤ Key Metrics:

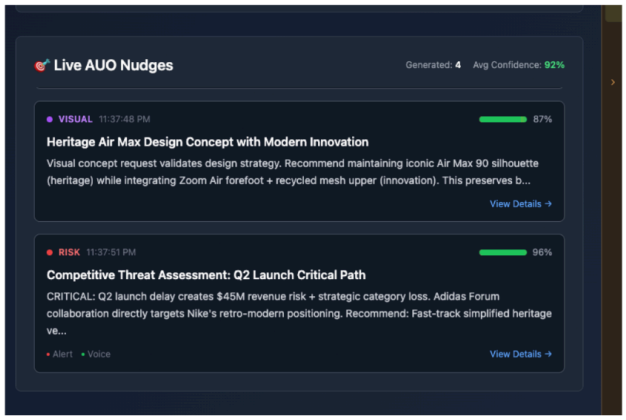

- **High** delivery risk
- **+$240K** overtime costs YTD

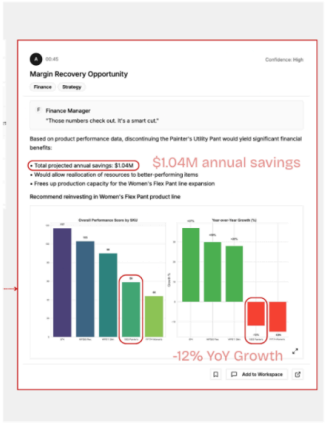

➤ Recommended Actions:

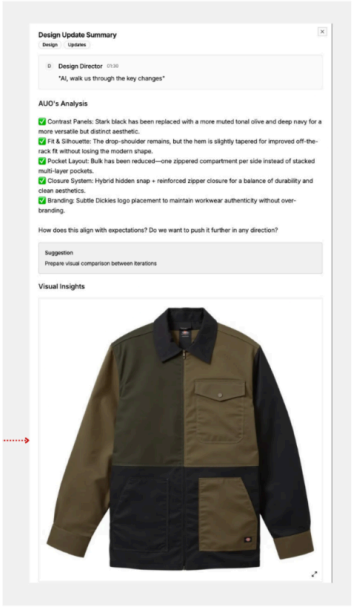

- ● Approve contractor budget (Finance)
- ● Prioritize product roadmap (Product)
- ○ Fast-track hiring for 3 positions (HR)

Certainly! Here is the **ultimate, comprehensive Donna MVP development guide** combining **step-by-step instructions, detailed vibe coding prompts for Claude Code, and "check & confirm" review prompts** — everything you need to efficiently build, verify, and iterate each phase of your app.

Ultimate Donna MVP Development Guide for Claude Code

Phase 0: Foundations & Environment Setup

Step 0.1: Backend Setup — Auth APIs

Development Prompt:

Generate a Node.js Express REST API with JWT authentication.

Endpoints:

- POST /auth/register: Accepts {name, email, password}, validates input, hashes password, stores user with role (leader or participant).
- POST /auth/login: Accepts {email, password}, verifies credentials, returns JWT and user role.
- GET /users/me: Returns logged-in user info including role.

Use PostgreSQL for data storage. Include middleware for auth verification.

Output complete code with comments.
Check & Confirm Prompt:

Review the generated Node.js Express authentication API code:

- Confirm user registration endpoint validates email format and password strength.
- Confirm passwords are hashed securely before storage.
- Confirm login endpoint returns a valid JWT token and includes user role in the response.
- Confirm protected routes reject unauthorized requests properly.
- Provide a JSON example response for successful login and error cases.

Output a checklist of these validations and any issues found.
Step 0.2: Frontend Setup — Login & Dashboard

Development Prompt:

Generate a React login form component with validation for email and password.

Include:
- Submit handler calling backend /auth/login API.
- Error display for invalid credentials.
- On success, store JWT securely and update auth context.
- Protected dashboard page displaying "Welcome, [User Name]" and user role.
- Use Lovable UI components.

Output complete React components with TypeScript.
Check & Confirm Prompt:

Review the React login form component:

- Confirm email and password inputs have client-side validation.
- Confirm the form calls backend /auth/login API and handles success and failure responses.
- Confirm JWT token is stored securely and auth state persists across page reloads.
- Confirm protected dashboard route shows the logged-in user’s name and role.
- Provide sample screenshots or descriptions of UI states (loading, error, success).

Output a checklist and any improvements needed.
Step 0.3: Prompt Repo Setup — Auth Prompts

Development Prompt:

Write Markdown prompt templates for:
1. User registration validation: Check email format, password strength, return JSON success/error.

2. User login verification: Verify credentials, return JWT and user role in JSON.
3. Fetch current user profile from JWT token.

Include example input JSON and expected output JSON for each prompt.
Check & Confirm Prompt:

Review the Markdown prompt templates for user registration and login validation:

- Confirm prompts cover valid and invalid email formats.
- Confirm password strength requirements are clearly defined.
- Confirm JSON input and output examples match expected backend API schemas.
- Confirm prompts produce consistent, parseable JSON outputs.

List any ambiguities or suggested improvements.
Phase 1: Before the Meeting

Step 1.1: Backend Meeting Creation & Onboarding APIs

Development Prompt:

Generate backend API code to:
- Create meeting with title, agenda items, participant roles, and file upload handling.
- Endpoint for participant to join meeting with role and personal goals.
- Call OpenAI Assistants API to generate agenda summary and prep cards.
- Store generated summaries and prep cards linked to meeting and participant.

Include PostgreSQL models and API routes.
Check & Confirm Prompt:

Review the meeting creation and participant onboarding API code:

- Confirm meeting creation accepts title, agenda items, participant roles, and uploaded files.
- Confirm participant join API records role and personal goals accurately.
- Confirm Assistants API calls generate agenda summaries and prep cards, storing results properly.
- Confirm traceability metadata is linked to summaries and prep cards.
- Provide example JSON responses for meeting creation and participant join.

Report any mi

—----------

Absolutely! Here's a comprehensive and detailed **Donna MVP overall plan and architecture**, fully aligned with your **Meeting Leader Driven Model** and reflecting the latest clarifications on user flow, role control, and AI integration. This includes backend, frontend, multi-agent orchestration, and user journeys.

Donna MVP Overall Plan & Architecture with User Flow

1. User Flow & Roles Overview

Primary User Types

- **Meeting Leader**Full control of meeting flow and AI nudges
- Receives all AI-generated nudges and manages curation
- Controls voice mode: activates, mutes, and shares nudges
- Shares selected nudges on shared board for participants
- Oversees agenda, timeline, and meeting context via dashboard
  | **Meeting Participants** |
- Minimal distractions during meetings
- View only nudges shared by meeting leader on shared board
- Engage in discussion without direct AI nudge interruptions

2. User Journey Phases

Before Meeting Conversational prep: set agenda, upload docs, assign roles; reviews AI-generated prep cards Receives pre-meeting context & prep cards shared by leader **During Meeting** Monitors real-time AI nudges on dashboard; filters, pins, dismisses; controls voice mode; shares nudges on shared board Views shared nudges on shared board (if enabled); no direct AI interruptions **After Meeting** Reviews and exports meeting summary; manages follow-ups; maintains meeting memory Views personalized summary and assigned tasks; reviews shared insights

3. Architecture Overview

[Participants' Devices] <--shared board--> [Frontend - Participant UI]
<--WebSocket--> [Backend API & Orchestrator]
<--WebSocket--> [Frontend - Leader Dashboard]
|
|---> OpenAI Realtime API (audio transcription)
|
|---> OpenAI Assistants API (meeting memory, onboarding, summaries)
|
|---> OpenAI Agents SDK (multi-agent nudging, voice control)
|
|---> n8n + ComfyUI (visual insight generation & review)
|
|---> Persistent Storage (DB, file storage, image storage)
|
|---> External integrations (Calendar, CRM, Email APIs)
4. Detailed Components & Responsibilities

Frontend - Leader UI Full meeting control dashboard: agenda, timeline, nudge feed, voice orb, shared board controls, visual insight gallery **Frontend - Participant UI** Shared board view showing leader-approved nudges and

visuals; distraction-free otherwise **Backend API & Orchestration** Manages meetings, users, roles, permissions; handles real-time streaming; orchestrates multi-agent nudging; controls shared board state **OpenAI Realtime API** Streams meeting audio → transcribes speech → sends text chunks to backend **OpenAI Assistants API** Maintains meeting memory, generates onboarding & post-meeting summaries **OpenAI Agents SDK** Runs leader agent (full nudge feed, voice control), participant agents (role-based filtering for shared board), visual insight agent **Visual Insight Pipeline** n8n workflow triggering ComfyUI image generation, agent-driven quality review, and metadata enrichment **Storage** Database (PostgreSQL/Supabase) for structured data; S3 or similar for files/images **External Integrations** Calendar invites, CRM updates, email follow-ups via APIs

5. Development Plan by Phase (With User Flow Alignment)

Foundations User auth, DB schema for meetings, roles, threads; API scaffolding Login, role selection, dashboard skeleton Auth prompts; API contracts in Markdown **Before Meeting** Meeting creation, file upload handling, onboarding APIs using Assistants API Meeting creation UI, participant onboarding flow, prep card display Onboarding & prep prompt templates **During Meeting** WebSocket real-time audio ingestion; multi-agent orchestration (leader agent full feed + voice control, participant agent filtered shared board feed); traceability metadata Leader dashboard: nudge feed, voice orb controls, agenda; Participant shared board UI Multi-agent prompts for nudges, voice nudge triggers, traceability explanations **Visual Insights** n8n workflow setup; ComfyUI API integration; visual insight agent orchestration Visual insight gallery, pin/comment UI Visual insight prompt templates and automated review prompts **After Meeting** Summarization & task extraction APIs; export & integrations (calendar, CRM) Summary review UI, task lists, export controls Summari

Certainly! Here's an **even more detailed Donna MVP development plan** structured around **user journeys**, mapped clearly to the features and technical tasks you'll develop phase-by-phase. This approach aligns perfectly with vibe coding and your collaboration with Fredy on visual insights.

Donna MVP Development Plan with User Journeys & Development Mapping

1. User Journeys Overview

Meeting Leader Efficiently run meetings, control agenda, receive high-impact alerts Create meeting → Set agenda & roles → Monitor live meeting flow → Receive voice nudges & timeline alerts → Review post-meeting summary & follow-ups Participant Prepare effectively, receive personalized support, contribute insights Join meeting → Provide role & goals → Receive role-based prep cards → Get personalized text nudges during meeting → Review own summary & tasks post-meeting

2. Phase-by-Phase User Journey & Development Details

Phase 0: Foundations & Setup

User Journey

- Users register/login
- Roles assigned or selected (Leader or Participant)
- Access to meeting dashboard or meeting creation

Development Focus

- Backend: Auth system, user/role models, DB schema
- Frontend: Login page, role selection, dashboard UI skeleton
- Vibe code: API wrappers, prompt templates for auth flows

Phase 1: Before the Meeting — Onboarding & Preparation

Meeting Leader Journey

- Opens meeting creation page
- Uploads documents and defines agenda
- Assigns participant roles
- Reviews AI-generated agenda summaries and tension cards
- Invites participants

Participant Journey

- Receives meeting invite
- Joins onboarding UI
- Provides role info and goals via voice or text
- Uploads personal reference files if any
- Reviews AI-generated prep cards tailored to role

Development Tasks

Meeting creation API to create meetings, upload files, store agenda and roles Meeting setup UI with file upload and agenda builder Assistants API onboarding prompt templates Participant onboarding API to join meeting, capture role/goals Onboarding UI with voice/text input and file upload Role-aware prep card prompt engineering Prep card generation Generate prep cards via Assistants API Display role-filtered prep cards dynamically Chunked file RAG prompt templates HITL feedback Store participant edits/flags UI for confirming/editing prep cards Feedback capture logic prompt

Phase 2: During the Meeting — Real-Time Support & Nudging

Meeting Leader Journey

- Starts meeting with audio streaming active
- Monitors agenda timeline and nudges dashboard
- Receives orb dimming alerts for critical voice nudges and timeline warnings
- Controls voice nudge playback and overrides
- Pins or dismisses nudges, interacts with visual insights gallery

Participant Journey

- Joins live meeting session
- Receives non-voice, role-specific insight cards silently
- Interacts with nudges: pins, dismisses, requests clarification
- Views visual insights as they appear

Development Tasks

Real-time transcription WebSocket service streaming audio → OpenAI Realtime API Voice orb with mute/start/stop controls Streaming ingestion and batching workflow Multi-agent nudging Multi-agent orchestration for participant &

leader agents Role-filtered nudge cards + leader orb UI Role-specific insight prompt engineering Traceability metadata Capture source quotes, confidence, document links Expandable traceability info in nudge cards Explainability and source-linking prompt templates Visual insight orchestration Trigger n8n workflows for ComfyUI, review images Visual insight gallery with pin & comment UI ComfyUI orchestration and image review prompts User interactions (pin/dismiss) API endpoints to handle nudge feedback UI controls for pin/dismiss/clarify Feedback loop prompt snippets Voice nudge control Leader agent controls voice nudge triggers + playback Orb dimming animation and voice playback controls Voice alert prompt templates

Phase 3: After the Meeting — Summaries & Follow-Ups

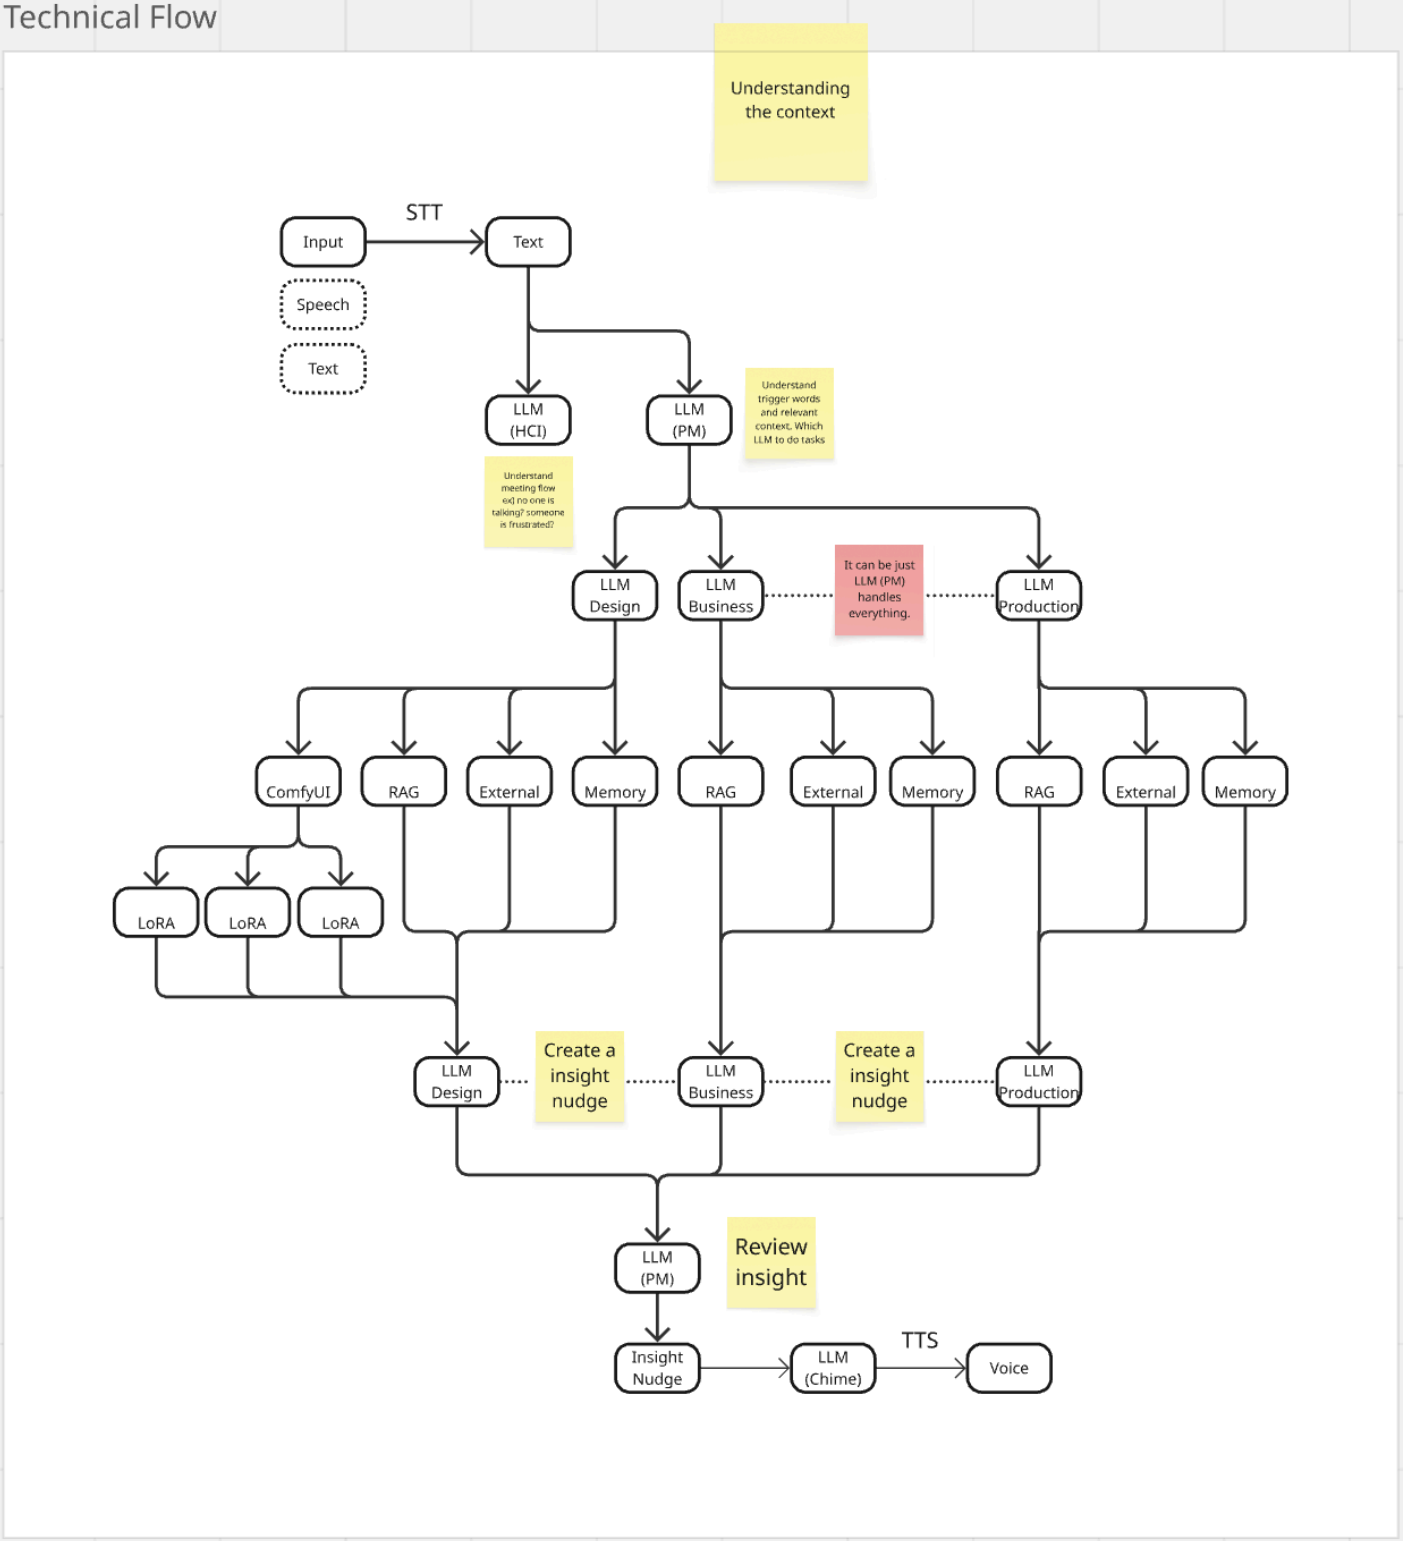

Meeting Leader Journey

- Reviews full meeting summary and decisions
- Exports meeting notes and action items to calendar/CRM
- Oversees unresolved tensions or flagged issues

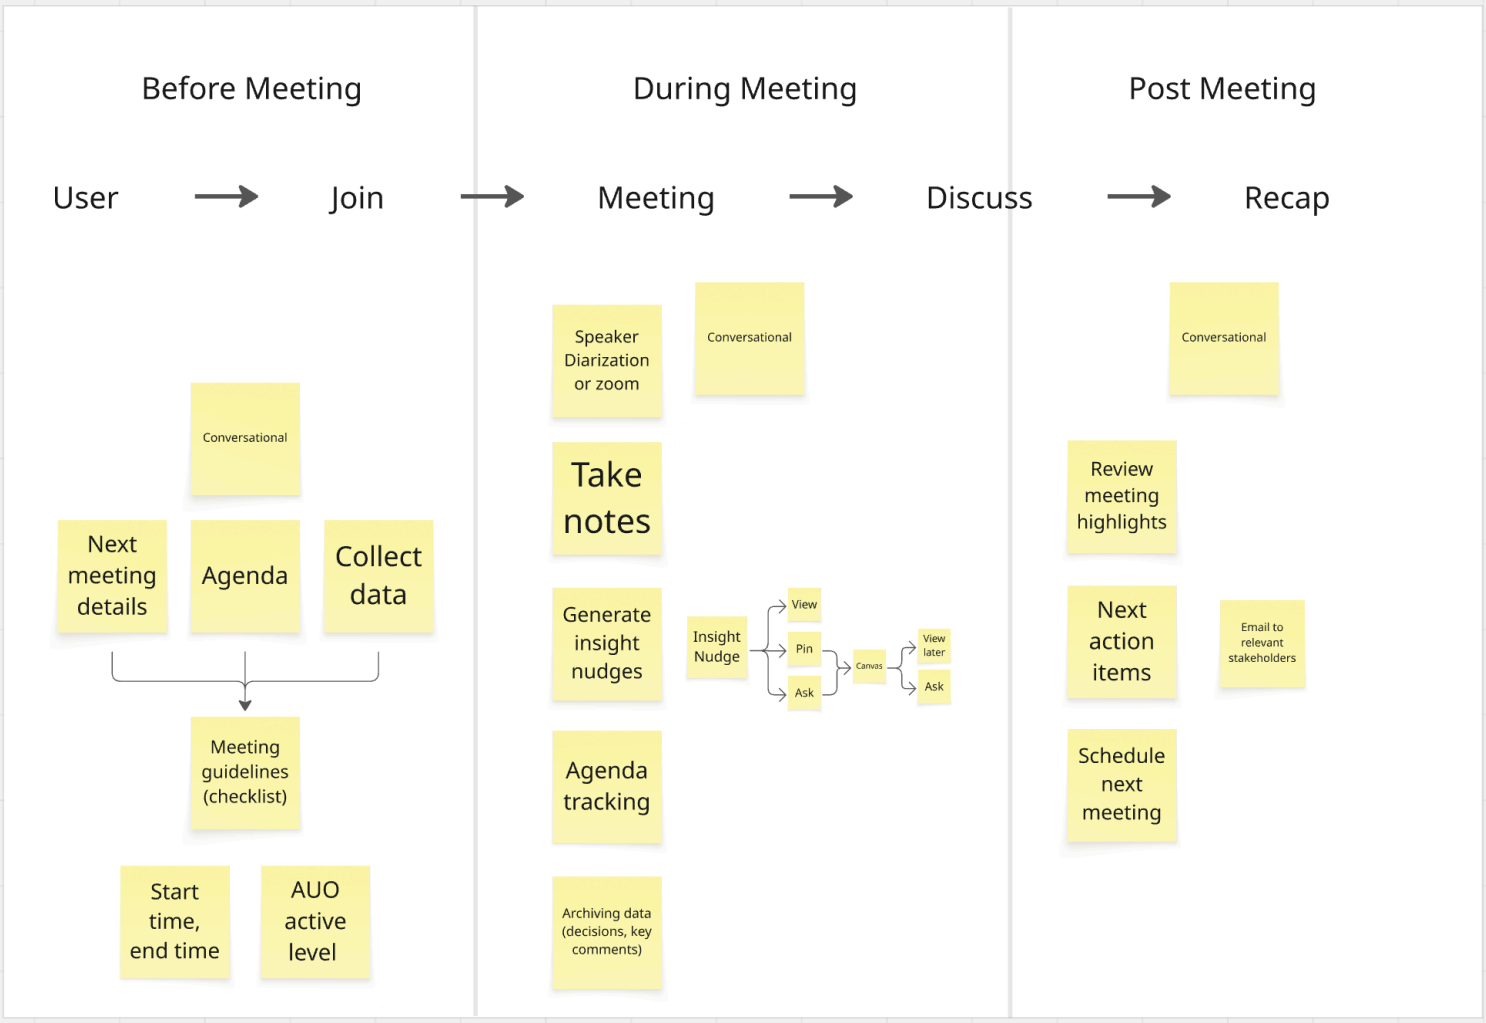

Participant Journey

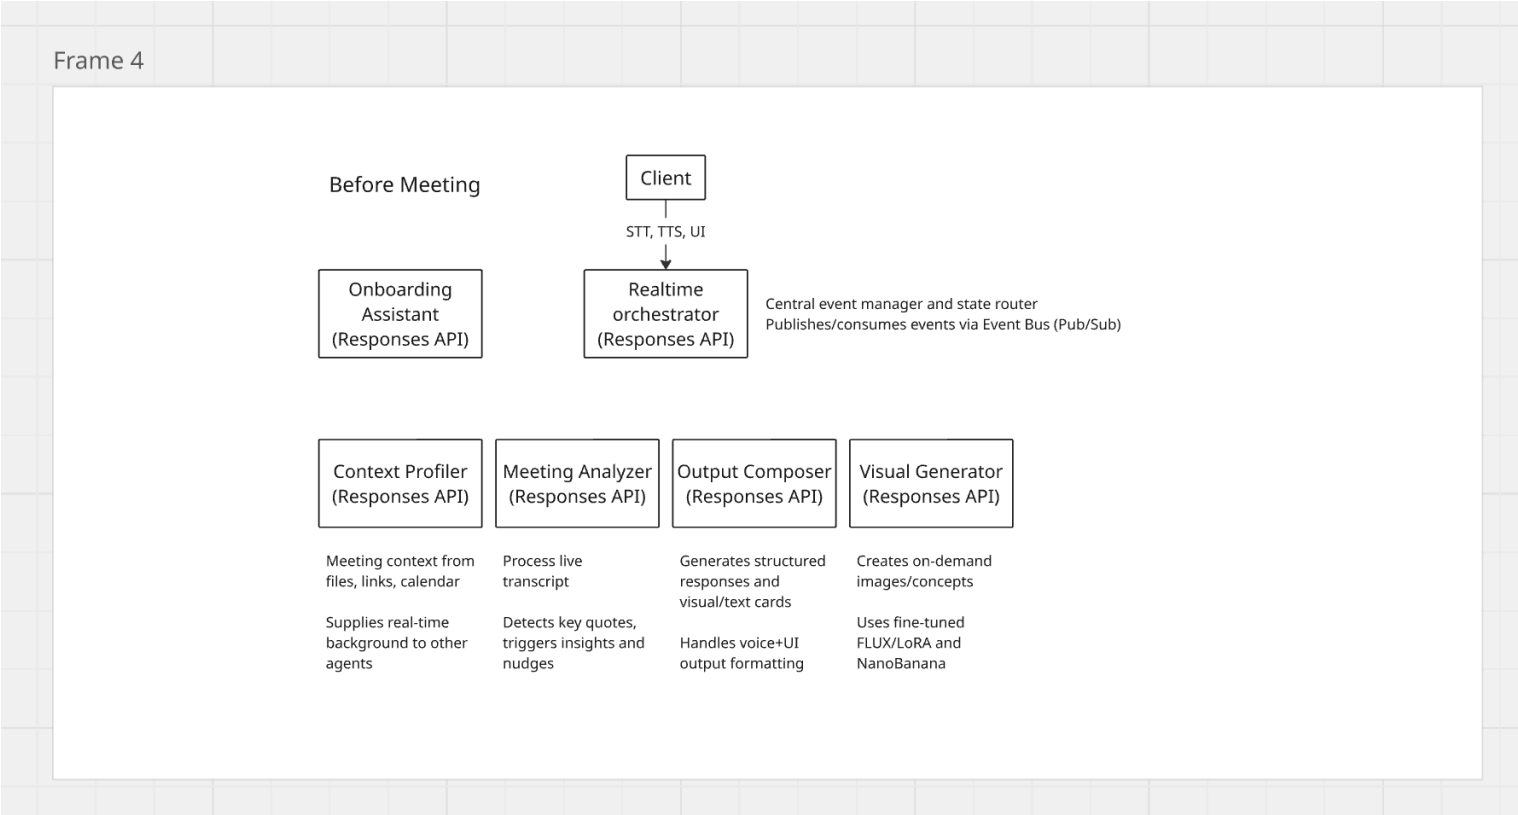

- Views personalized meeting summary & assigned tasks

10:25 AM - Just finished materials meeting, walking to next meeting

Opens phone (iPhone)
Opens Mail app (already open with notifications)
Taps: New Email

To: research@Donna.app
Subject: [empty - not needed]

Body: (voice dictation)
"What's the current retail landscape for trail shoes? Foot
Locker closures, Dick's expansion, specialty stores?"

Sends.

10:26 AM - Confirmation email arrives:
"Got it! Researching retail landscape for trail shoes.
Results in ~60 seconds for quick facts, full analysis
in tonight's report."

10:27 AM - Results email arrives:
"QUICK FACTS - Trail Shoe Retail Landscape:
- Foot Locker: ~2,400 stores, closing 400 by 2026
- Dick's: ~724 stores, expanding House of Sport
- Fleet Feet: ~275 stores, growing fast
[View detailed analysis →]"

10:28 AM - Walks into next meeting (fully informed)

Perfect! I'll review both documents and create a comprehensive analysis of what needs to be built.

📋 Final Analysis: What Actually Needs to Be Built

After reviewing both the Product Overview and Refinements, here's the complete picture:

✅ **Confirmed Requirements**

1. BEFORE Meeting - Agenda Setup

Live Transcript with Visual Confirmation:

```
┌─────────────────────────────────────────────────────────────┐
│ LEFT PANEL: Live Transcript │
│ - Shows conversation in real-time │
│ - Donna responses + User responses │
│ - Builds up as conversation progresses │
│ │
│ RIGHT PANEL: Agenda Preview │
│ - Updates incrementally │
│ - Shows numbered list with durations │
│ - User can see it building up │
│ │
│ [Confirm & Send] [Start Over] [Edit Text] │
└─────────────────────────────────────────────────────────────┘
```

Key Features:

- ✅ OpenAI Realtime API (full duplex voice)
- ✅ Live transcript display (both Donna and user)
- ✅ Incremental agenda building (updates as conversation goes)
- ✅ Visual confirmation before sending
- ✅ Edit capability (can manually fix text)
- ✅ Mock email sending in V1 (real in V2)

Learning System:

- Track how often user corrects
- Learn agenda patterns by meeting type
- Auto-suggest based on history

2. DURING Meeting - Expertise Activation

Corrected Understanding:

Activation Nudge = External Context + User Expertise Match

What Sarah sees:

```
┌─────────────────────────────────────────────────────────────┐
│ 🟢 YOUR EXPERTISE NEEDED │
│ │
│ Conversation topic: Cushioning performance │
│ │
│ External context: │
│ Industry benchmark: 15% energy return │
│ Source: NPD Group [Tier 1] │
│ │
│ Your expertise: Cushioning systems, testing │
│ │
│ [I can contribute] [Not relevant to me] │
└─────────────────────────────────────────────────────────────┘
```

Critical Insight:

- ❌ NO internal data in the nudge (12% test result)
- ✅ ONLY external intelligence (15% industry benchmark)
- ✅ Signals when external context is relevant to user's expertise
- ✅ User decides whether to share internal knowledge

How It Works:

1. Conversation mentions "cushioning performance"
2. Donna searches tier sources → finds "15% industry benchmark"
3. Donna matches topic to user expertise (Sarah = cushioning engineer)
4. Sarah receives private activation nudge with external context
5. Sarah chooses to contribute internal knowledge ("we're at 12%")

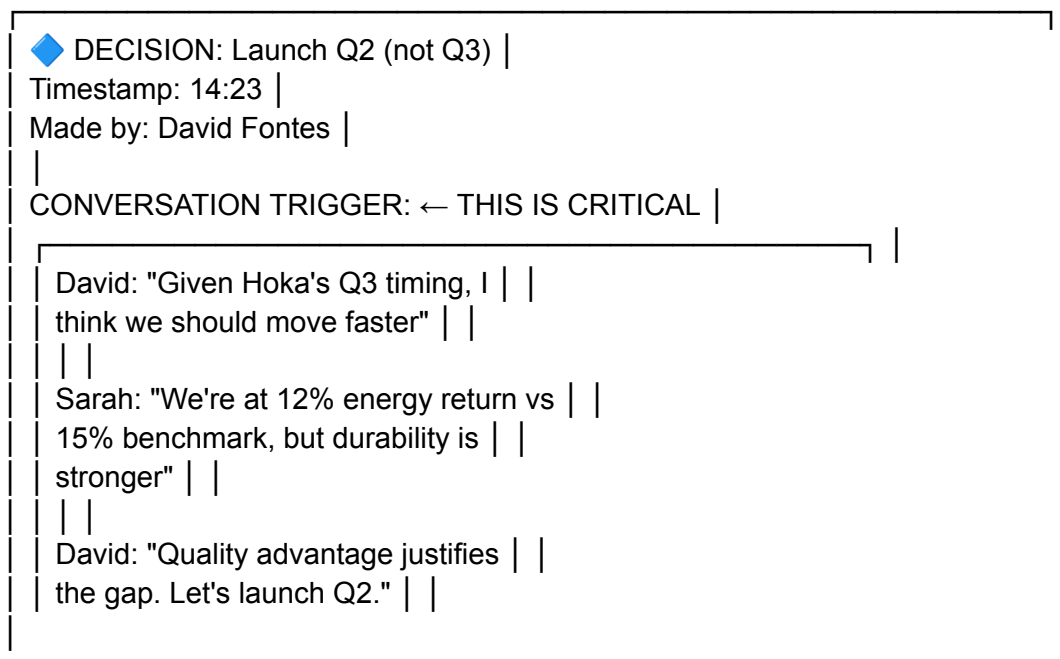

3. AFTER Meeting - Review & Confirm with Conversation Context

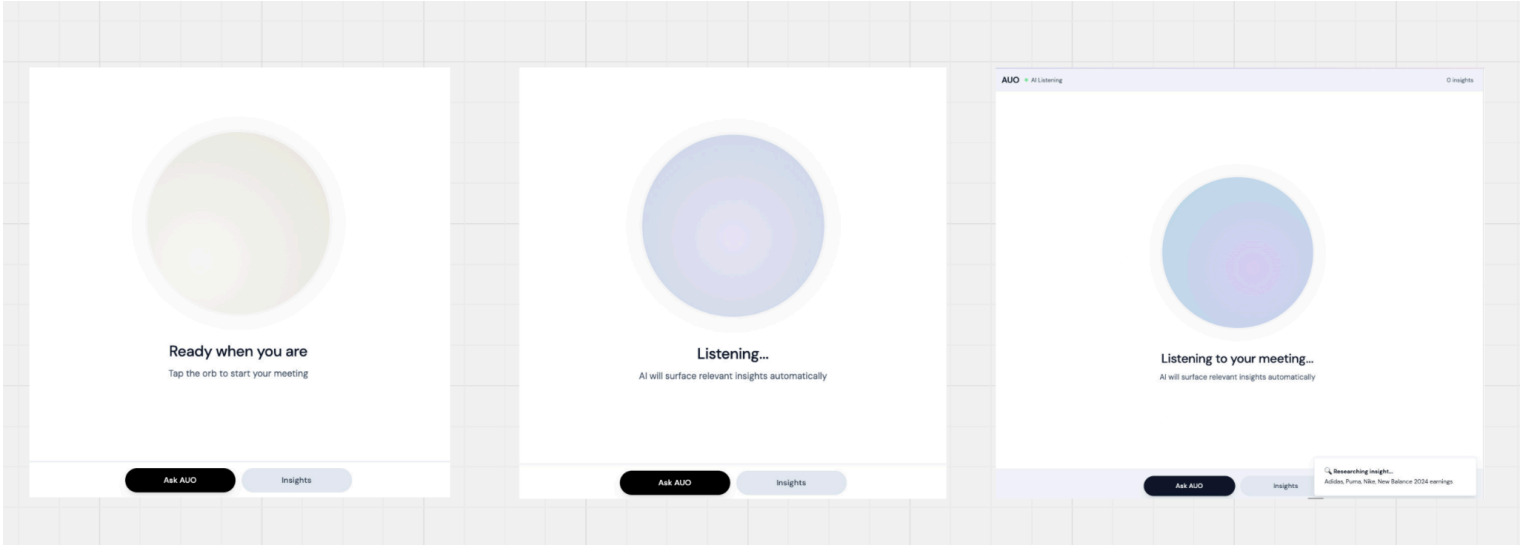

Your Requirement (CRITICAL):

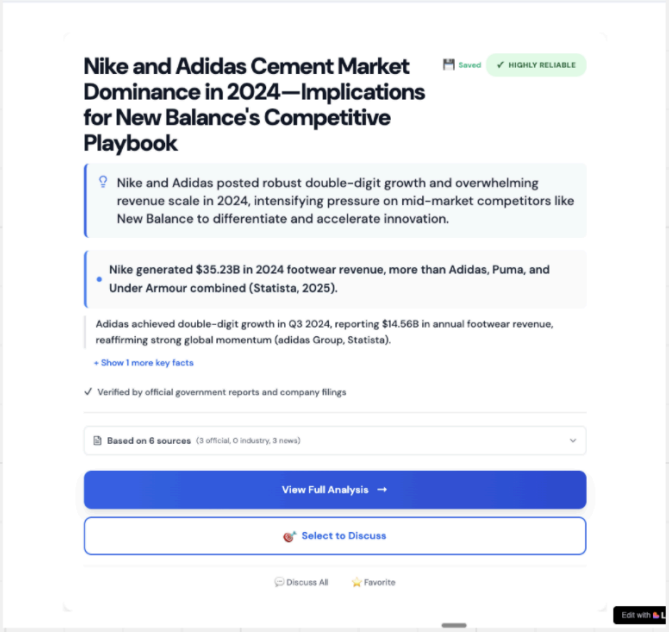

"It will be great if leadership user can see the conversation/quotes of the triggers for decisions and action items."

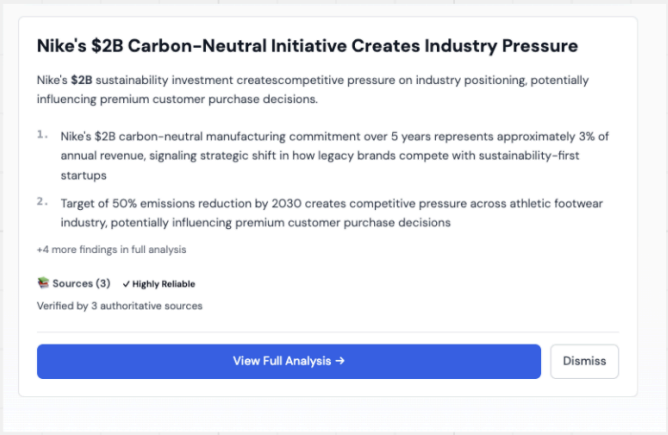

Implementation:

Nike and Adidas Cement Market Dominance in 2024—Implications for New Balance's Competitive Playbook
Saved
HIGHLY RELIABLE
Nike and Adidas posted robust double-digit growth and overwhelming revenue scale in 2024, intensifying pressure on mid-market competitors like New Balance to differentiate and accelerate innovation.
Nike generated $35.23B in 2024 footwear revenue, more than Adidas, Puma, and Under Armour combined (Statista, 2025).
Adidas achieved double-digit growth in Q3 2024, reporting $14.56B in annual footwear revenue, reaffirming strong global momentum (adidas Group, Statista).

Nike's $2B Carbon-Neutral Initiative Creates Industry Pressure
Nike's $2B sustainability investment createscompetitive pressure on industry positioning, potentially influencing premium customer purchase decisions.
1. Nike's $2B carbon-neutral manufacturing commitment over 5 years represents approximately 3% of annual revenue, signaling strategic shift in how legacy brands compete with sustainability-first startups
2. Target of 50% emissions reduction by 2030 creates competitive pressure across athletic footwear industry, potentially influencing premium customer purchase decisions

Nike's 2024 Marketing Strategy Focuses on Innovation, DTC Adjustments, and Major Event Sponsorship

KEY FINDINGS (6)

Nike's 2024 marketing strategy integrates high-profile event sponsorship (Olympics) with intensified product innovation efforts, aiming to counteract recent flat sales performance.

The pivot back to wholesale alongside DTC adjustments reflects Nike's recognition of channel strategy flaws, impacting revenue growth potential.

Investment in the Nike Air product lineup innovation and athlete co-creation process is designed to sustain brand relevance over a multiyear horizon.

Nike's combined focus on event-driven marketing and product innovation positions it to defend market share against emerging rivals and shifting consumer preferences.

Despite these initiatives, Nike's Q3 2024 revenues were flat, underscoring the urgency of strategic marketing recalibration.

Nike's strategy highlights the importance of balancing innovation with channel optimization to maintain competitive advantage in a saturated sportswear market.

KEY FINDINGS

Adidas aligns environmental strategy with SBTi and UN SDGs, indicating commitment to climate action and ethical manufacturing (Tier 3 source, credibility 55/100)

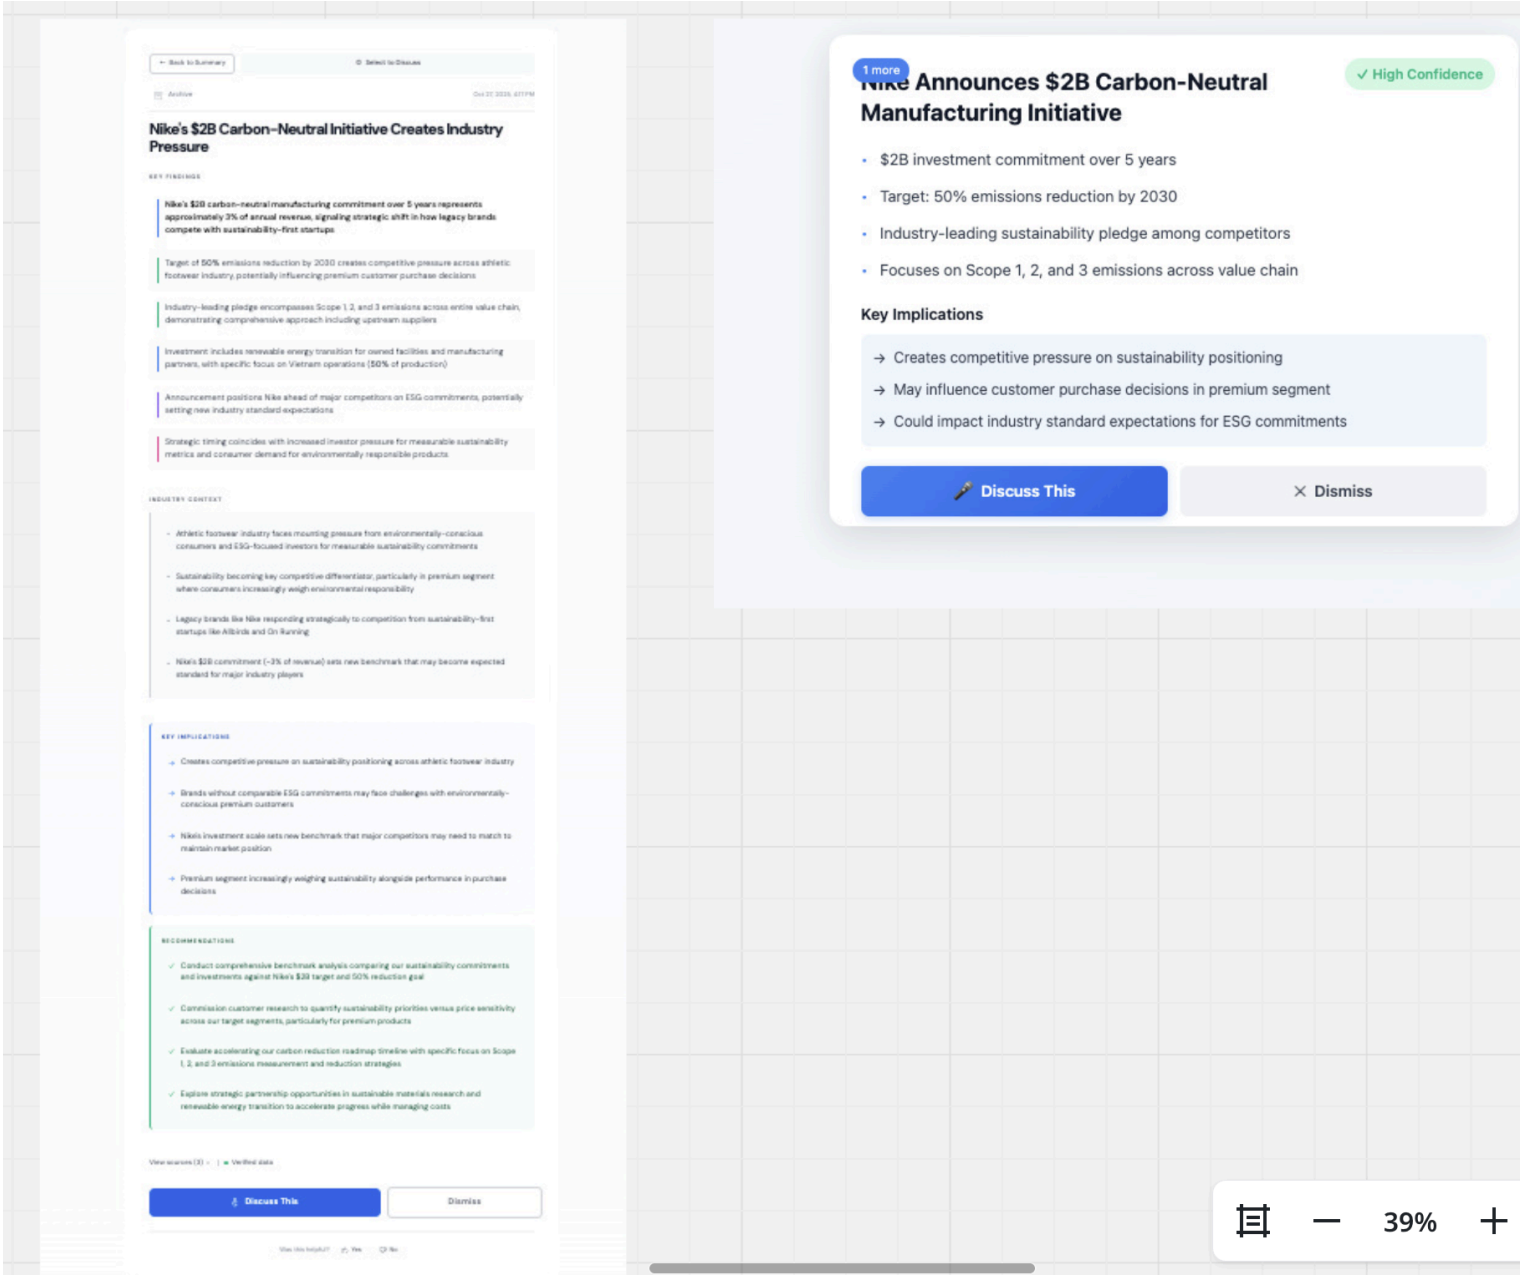

2025 and 2030 sustainability goals span environmental, social and governance priorities, suggesting a holistic ESG approach (Tier 3 source, credibility 55/100)

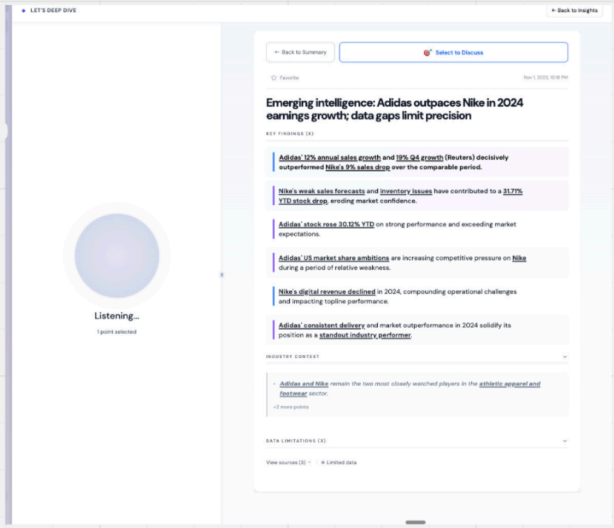

Adidas co-signs multiple climate and sustainability charters, strengthening positioning as a sustainability leader (Tier 3 source, credibility 55/100)

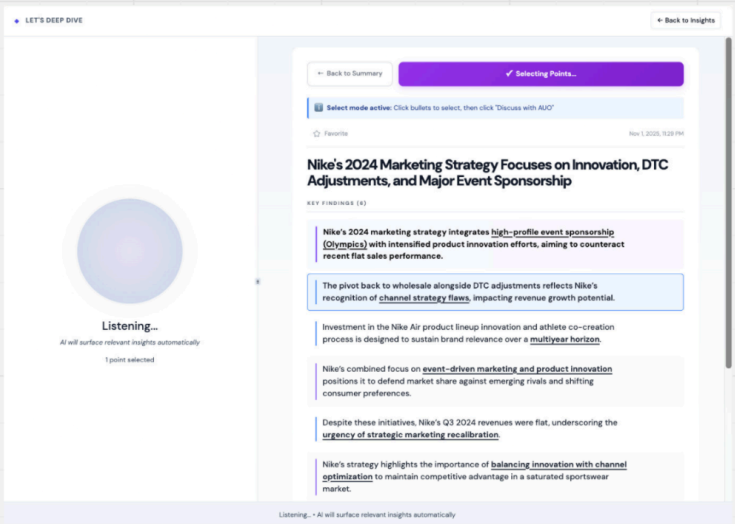

Robust emissions reductions, circular product launches, and climate engagement cited, but specifics and financials lacking for competitive comparison (Tier 3 source, credibility 50/100)

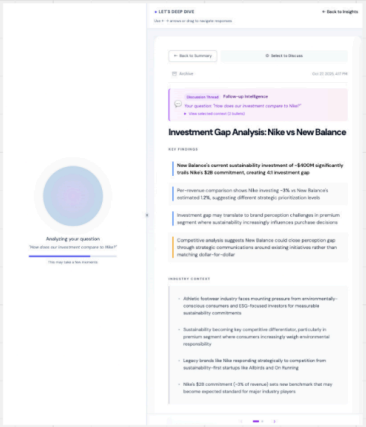

Addressing Scope 3 emissions across full value chain shows more comprehensive approach than manufacturing focus alone (Tier 3 source, credibility 50/100)

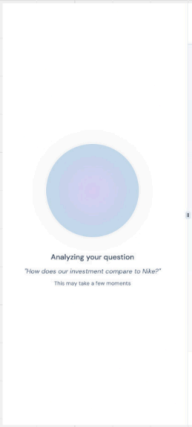

Sustainable material innovations, like with TERREX brand, indicate potential for technical and environmental differentiation (Tier 3 source, credibility 50/100)

Emerging intelligence: Adidas outpaces Nike in 2024 earnings growth; data gaps limit precision
KEY FINDINGS (6)
Adidas' 12% annual sales growth and 19% Q4 growth (Reuters) decisively outperformed Nike's 9% sales drop over the comparable period.
Nike's weak sales forecasts and inventory issues have contributed to a 31.71% YTD stock drop, eroding market confidence.
Adidas' stock rose 30.12% YTD on strong performance and exceeding market expectations.
Adidas' US market share ambitions are increasing competitive pressure on Nike during a period of relative weakness.
Nike's digital revenue declined in 2024, compounding operational challenges and impacting topline performance.
Adidas' consistent delivery and market outperformance in 2024 solidify its position as a standout industry performer.
INDUSTRY CONTEXT
Adidas and Nike remain the two most closely watched players in the athletic apparel and footwear sector.

Investment Gap Analysis: Nike vs New Balance
KEY FINDINGS
New Balance's current sustainability investment of ~$400M significantly trails Nike's $2B commitment, creating 4:1 investment gap
Per-revenue comparison shows Nike investing ~3% vs New Balance's estimated 1.2%, suggesting different strategic prioritization levels
Investment gap may translate to brand perception challenges in premium segment where sustainability increasingly influences purchase decisions
Competitive analysis suggests New Balance could close perception gap through strategic communications around existing initiatives rather than matching dollar-for-dollar

Nike Outperforms Adidas in Latest Earnings with Stronger Revenue Growth and Market Position
KEY FINDINGS (6)
Finding 1: Nike's latest quarterly revenue surpassed $13 billion, reflecting a growth rate of approximately 5-7%, while Adidas reported revenues near $6 billion with growth around 2-3% for the comparable period. This demonstrates Nike's stronger top-line momentum and market share gains.
Finding 2: Nike's gross margin expanded by roughly 2 percentage points year-over-year, supported by increased direct-to-consumer sales and premium product lines. Adidas's margin growth was less pronounced, indicating operational challenges and pricing pressures.
Finding 3: Nike's digital sales now represent over 30% of total revenue, showcasing its effective omnichannel strategy. Adidas trails with digital sales closer to 20%, highlighting a gap in e-commerce penetration.
Finding 4: Nike's earnings per share (EPS) growth outpaced Adidas, driven by operational efficiencies and higher revenue growth, reinforcing Nike's financial strength and shareholder value creation.
Finding 5: Nike's strategic roadmap includes continued investment in innovation, sustainability, and direct consumer engagement through 2025, while Adidas is focusing on restructuring and cost control to improve profitability.
Finding 6: The earnings comparison reveals a competitive threat for Adidas to accelerate digital transformation and product innovation, while Nike's leadership presents an opportunity for New Balance to differentiate through niche innovation and targeted market segments.

STRATEGIC RESEARCH
Hi Dan,
Received. I'm analyzing the competitive landscape for Hoka's trail running segment.
Research Plan:
Market share trends vs. Salomon and Nike (2023-2024)
Key product differentiators driving recent growth
Consumer sentiment analysis from specialized forums
Expect a comprehensive intelligence brief in approximately 10 minutes.
Is this plan aligned?
Looks good, proceed
Adjust plan

STRATEGIC RESEARCH
Hi Dan,
Received. I'm checking the current stock price for NVIDIA (NVDA) right now.
Expect an answer in approximately 1 minute.
Reply to this email if you need to adjust the scope.

Your Intelligence Report is Ready
Hi Dan,
Your research request has been completed. Here is the executive summary of our findings.
Executive Summary
Hoka dominates trail running (28% share), but facing pressure from two sides:
Technical Niche: Salomon is capturing the ultra-running segment with the Genesis line.
Consumer Demand: Sentiment analysis shows a 40% increase in complaints about outsole durability.
Competitive Threat: Nike's Zegama 2 is directly targeting this durability gap.

STRATEGIC RESEARCH
Hi Dan,
You have "Product Strategy Review: Q4" coming up on Thursday.
I can research a few areas to prep you. Here's what I'm thinking:
Competitor Moves: Nike's Alphafly 3 pricing strategy vs. Adidas Adios Pro Evo 1
Material Innovation: Impact of On Running's new CleanCloud foam on sustainability claims
Consumer Sentiment: Analysis of "durability" complaints in Hoka Clifton 9 reviews
What sounds useful?
